

See a complete picture of your fiber network.

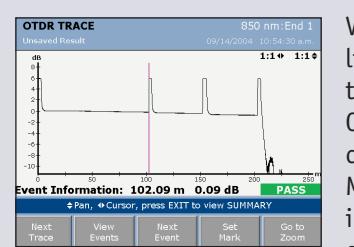

You need a complete picture to ensure the performance of mission-critical fiber optic links. OptiFiber gives you more ways to look at fiber optic cabling.

ChannelMap™

Troubleshooting starts here. See a diagram of the channel, including patch cords. Check that the links are patched all the way across the campus, and determine the number and location of all connectors in a channel.

OTDR

View the trace of the fiber link. Compare one fiber to another by using Trace Overlay. Zoom in for a closer look at events. Move quickly to areas of interest. Identify suspect optical events such as high-loss connections.

Event Table

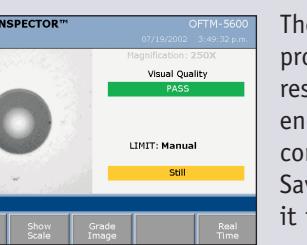

OptiFiber's event table analysis automatically characterizes and compares loss and reflectance against user defined limits. Results are displayed in an easy-to-read table which makes it simple for you to present to your customers.

Loss/Length Certification

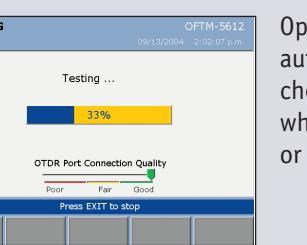

PASS/FAIL Optical loss analysis makes it easy to certify that the fiber meets applicable industry standard requirements – and presents the data in a clear, easy-to-interpret format.

FiberInspector™ Pro

The fiber inspection video probe provides a high-resolution 250X/400X end-face image of a fiber connector. Grade the image. Save the image – and show it to your customer.

OTDR Port Quality Check

OptiFiber incorporates an automated port quality check that warns the user when the OTDR port is dirty or contaminated.

Here's what cabling professionals are saying about OptiFiber® Certifying OTDR:

"More and more high-speed fiber installations are requiring extensive testing loss and length for certification before turning over the cable plant. We are finding that we need to measure insertion loss and deliver an OTDR trace to provide a complete picture of the network. OptiFiber combines both these capabilities in one instrument. Allowing me to give my customers a comprehensive view of their network with all the test results captured in one professional report."

Fiber Optics Manager

"This product was phenomenal and beat out other OTDRs because of the ease-of-use and the short one-meter dead zone. The fact that it is also lightweight makes it that much more attractive for field testing."

Communications Tech

"The OptiFiber will be of great value in large to medium premises environments – such as campus and metro applications – because the fiber is shorter than in long haul applications. Since most customers require more information than a power measurement, the OptiFiber would replace that unit in the campus environment. The most beneficial feature to me is the extensive and easy-to-interpret visual graphics."

Senior Estimator

For a first-hand look at the OptiFiber Certifying OTDR in action, visit our website at www.flukenetworks.com/optifiber and view the virtual demo. Or call us at 1-800-508-0490 (U.S.) and let a Fluke Networks representative show you how to take the work out of fiber certification and OTDR testing.

OptiFiber® Certifying OTDR

**Certify it.
Diagnose it.
Document it.**

**With the complete
fiber test solution
designed for network
owners and installers.**

As bandwidth increases in premises networks, the use of fiber optics grows – and so do the requirements for testing and certifying it. To ensure the performance of mission-critical fiber optic links, network owners are demanding information that gives them a more complete picture of their fiber plant. And no solution provides a more complete picture than the OptiFiber® Certifying OTDR. This power packed fiber optic testing solution gives you everything you need – in one fast, field tough tool. Now network owners and installers of all experience levels can quickly and easily troubleshoot connection-rich fiber optic cabling and certify and document fiber to the latest standards.

Bringing Network SuperVision™
to Premise Fiber Networks

Take your fiber testing and your business to a new level

The OptiFiber® Certifying OTDR gives you the visibility into fiber networks to quickly isolate faults, restore network performance and meet the emerging requirements for fiber testing and certification.

- All the information you need to see the quality of your fiber optic cabling. OptiFiber brings together all the critical information you and your customers need – on screen, on your PC and on printed reports.
- Take the complexity out of OTDR testing with automated trace and event analysis, trace overlay and simple link diagramming that anyone can understand.

- Boost productivity with automated optical loss testing and an interface that's fast and easy-to-use.

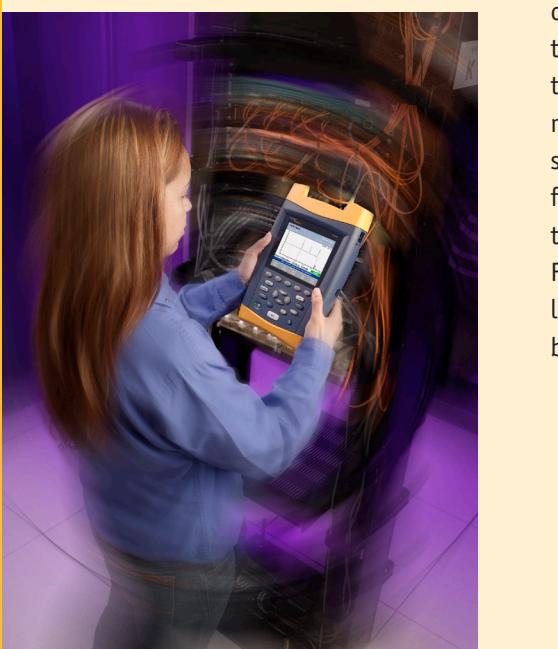

- Troubleshoot connections with a 250X/400X video microscope probe for fiber connector end-face analysis.

- Measure optical power directly to verify source and link performance.

- Streamline data management and create impressive reports that bring together all key test data – quickly, easily and completely.

- Work comfortably in tight spaces for long periods of time with one of the lightest and most user-friendly OTDRs available.

- Make a great investment by purchasing the capabilities you need today and adding new modules as your testing needs and technology evolves.

Certify to new customer specs and industry standards

Troubleshooting and certifying mission-critical fiber networks makes special demands on cabling professionals – and their tools. Only the OptiFiber Certifying OTDR from Fluke Networks is engineered specifically to meet these demands. It integrates Loss/Length Certification, ChannelMap™, OTDR analysis and video endface inspection in a single, easy-to-use tool.

Increase productivity from day one

OptiFiber makes it as easy to test fiber as copper – with a handheld tool and an intuitive interface similar to our user-friendly copper-based certification solutions. Now troubleshooting fiber and testing to the latest industry standards and customer specs is as quick and easy as pushing a button.

Get a complete picture of connection-rich fiber networks

The OptiFiber Certifying OTDR is the optimal solution for fiber networks with short fiber links. Advanced optoelectronics accurately pinpoint multiple events less than one meter apart. No overlooked faults; no wasted time and money trying to zero in on faults that elude the long event deadzones of other OTDRs.

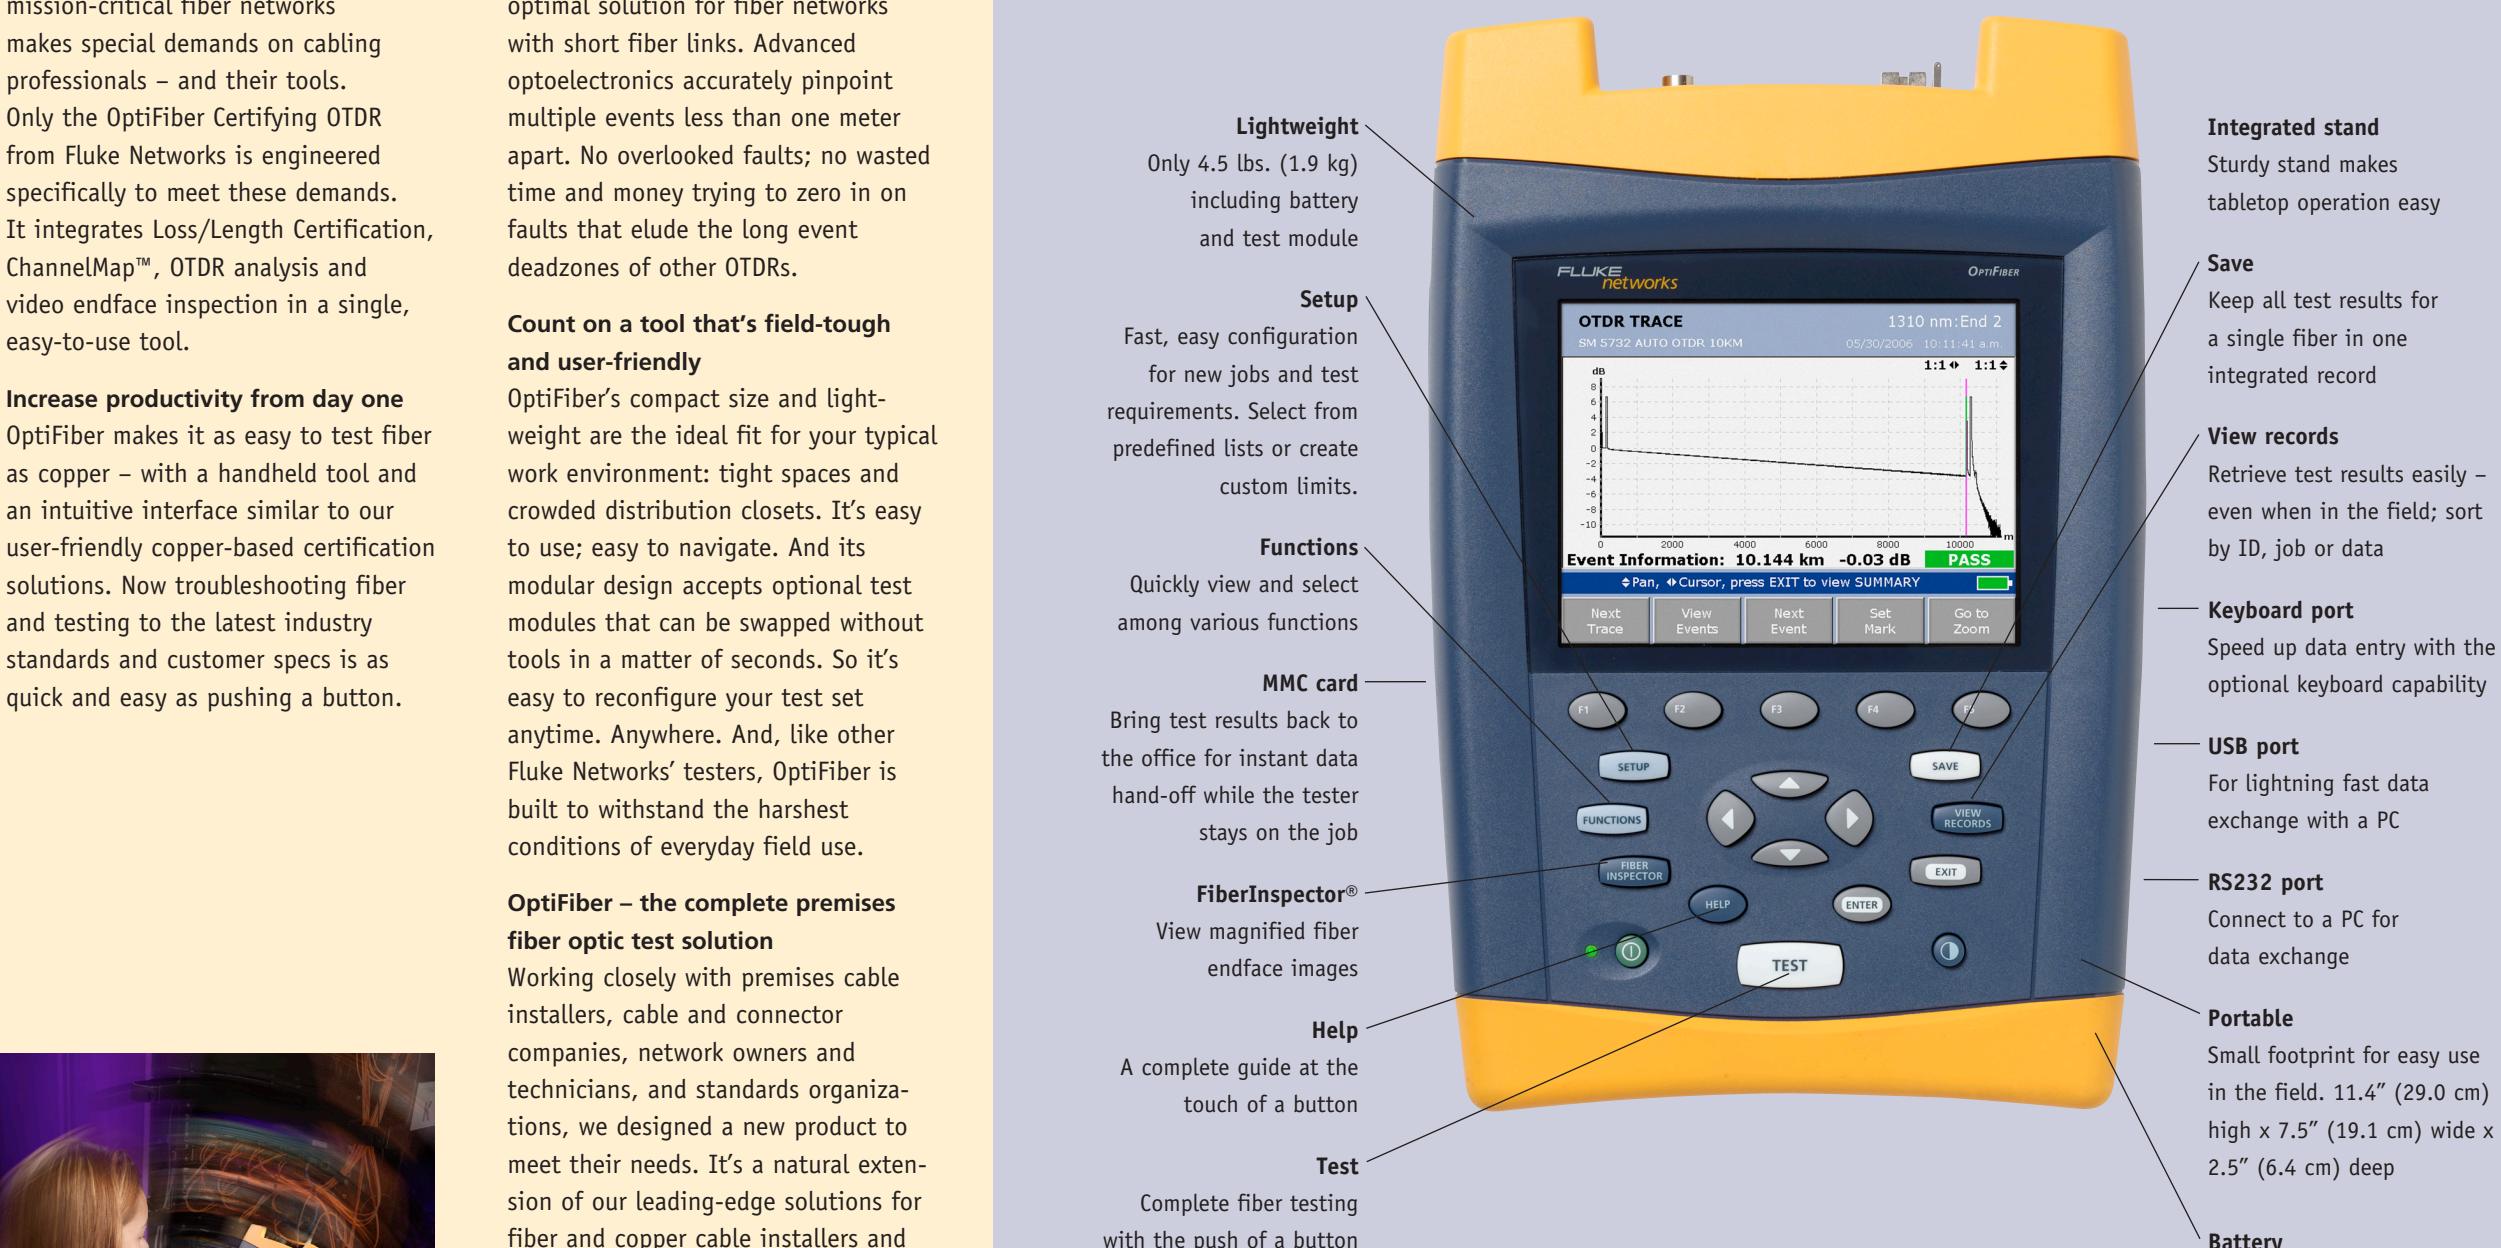

Count on a tool that's field-tough and user-friendly

OptiFiber's compact size and lightweight are the ideal fit for your typical work environment: tight spaces and crowded distribution closets. It's easy to use; easy to navigate. And its modular design accepts optional test modules that can be swapped without tools in a matter of seconds. So it's easy to reconfigure your test set anytime. Anywhere. And, like other Fluke Networks' testers, OptiFiber is built to withstand the harshest conditions of everyday field use.

OptiFiber – the complete premises fiber optic test solution

Working closely with premises cable installers, cable and connector companies, network owners and technicians, and standards organizations, we designed a new product to meet their needs. It's a natural extension of our leading-edge solutions for fiber and copper cable installers and technicians. And it's one more way Fluke Networks SuperVision™ helps you look into the future and leverage your business opportunities.

Window of opportunity: Enhanced fiber optic network visibility

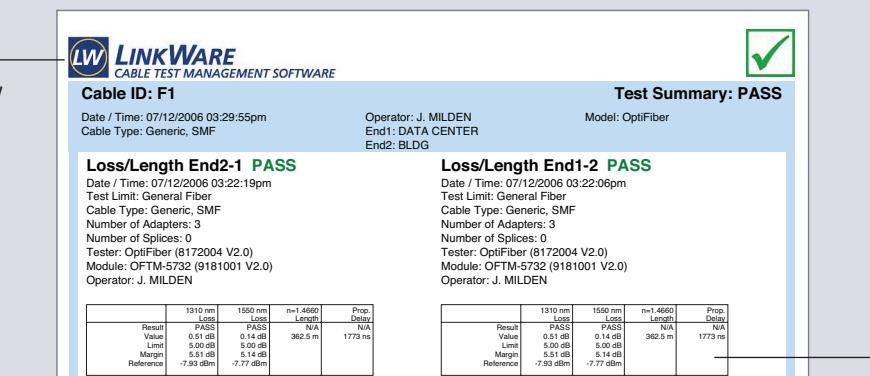

OptiFiber Smart Remote option
for Loss/Length Certification

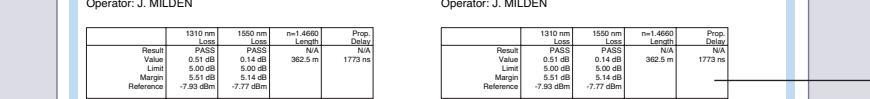

Share the most professional, accurate view of fiber optic infrastructure with LinkWare™ Cable Test Management Software

LinkWare™ Cable Test Management Software makes it easy to manage and print the rich test data, captured as only OptiFiber can, to ensure the quality of network installation and performance. Instantly access and organize your results and create professional reports that meet new certification demands, impress your customers and give you a competitive edge.

Merge results for the entire network with the DTX Series or DSP-4000 Series of cable analyzers.
