Sorensen XG Series / XTR Series

850 W, 1U Half Rack Programmable DC Power Supplies

- Highest Power Density
- Comprehensive Digital and Analog Interface Options
- Scalable, Multi-Unit Design
- Multi-Channel Support
- Straightforward Front Panel Controls
- High Reliability

670–850 W

6–600 V

1.4-110 A

The Sorensen XG Series and the Sorensen XTR Series are the same 850 Watt, 1U half-rack DC power supply, produced in a black, Sorensen branded model primarily for the United States and produced in a White, Sorensen branded model primarily for North American distribution and International markets.

The XG / XTR Series is the new standard for powerful, programmable DC power systems. Designed for test, production, laboratory, OEM and quality assurance applications, the XG / XTR Series provides a wealth of features to ensure accuracy and greater efficiency. It puts clean, reliable power at your disposal and delivers stable, variable output voltage and current for a broad range of development, test and system requirements.

Highest Power Density

High frequency, soft switching technology in the XG / XTR Series provides up to 850 Watts in a 1U half-rack package. This represents the highest power density available from any manufacturer. With 12 models, there is a configuration available to meet every application.

Comprehensive Digital and Analog Interface Options

The XG / XTR Series comes standard with USB 2.0, RS-232, RS-485, isolated and non-isolated analog interfaces to provide a comprehensive set of options to connect to a PC or other network device. This design provides the convenience of being able to accommodate a wide range of installation configurations. Ethernet and GPIB interfaces are available as options.

Scalable, Multi-Unit Design

XG / XTR Series power supplies can be connected in parallel or series to produce greater current or voltage output for your applications. This scalability allows you to build rack-mounted systems with the XG / XTR Series that exactly meet your existing requirements, while allowing for future expansion.

Multi-Channel Support

Up to 30 XGs / XTR Series can be connected easily via an RS-485 bus to provide the ultimate flexibility in remote programming. This eliminates the cost and complexity of requiring GPIB cards in each unit. Once connected, multiple power supplies can be controlled via a single LAN, USB 2.0, GPIB, RS-232 or RS-485 interface. This provides an efficient option to centrally manage each XG / XTR Series needed for your applications.

Straightforward Front Panel Controls

The XG / XTR Series is equipped with a unique push-button encoder and function selector dial to provide a simple, uncluttered front panel. Both voltage and current can be set quickly and easily using these two controls. Front panel access can be locked out to ensure secure remote operation. This streamlined front panel layout results in fast, intuitive set-up and operation of the XG / XTR Series.

High Reliability

To guarantee long-term trouble-free performance, the XG / XTR Series was designed with reliability in mind. Softswitching technology ensures higher mean time between failure (MTBF) by eliminating high voltage transients found in conventional hard-switching power supplies which can cause premature failure of power components. AMETEK engineers also rigorously tested the XG / XTR Series during the design phase using Highly Accelerated Life Testing (HALT). This rigorous test procedure combines powerful thermal and vibration technologies to stress a product beyond its rated specifications. HALT testing allows our engineers to uncover and correct design issues early in the development cycle. This care in design and comprehensive testing ensures the XG / XTR Series exceeds the reliability and quality standards of both AMETEK and our customers.

1. Maximum output voltage is guaranteed to be 0.1% of the rated voltage at zero output setting, using the front panel or digital remote programming modes. 2. Maximum output current is guaranteed to be 0.2% of the rated current at zero output setting, using the front panel or digital remote programming modes, and when measured with rated load resistance. 3. Total output power is also based on AUX1 Output Voltage (5 V) and AUX1 Output Current (0.5 A) and AUX2 Output Voltage (15 V) and AUX2 Output Current (0.5 A).

4. From 85–132 Vac or 170–265 Vac, constant load.
5. From 85–132 Vac or 170–265 Vac, constant load.
6. From no load to full load, constant input voltage.
7. For load voltage change, equal to the unit voltage rating, constant input voltage.
6. From cold when exclusion is a strained as 2. C. Vac there is the provide the strained is a strained when exclusion is a strained as a strained when exclusion is a

8. For 6 V models the current ripple is measured at 2–6 V output voltage and full output current. For all other models, the current ripple is measured at 10–100% output voltage and full output current.

Note: All specifications are subject to change.

Environmental Specifications (Ind	oor use)					
Operating Temperature Range	32°F to 122°F, 100% load (0°C to 50°C)					
Storage Temperature Range	-4°F to 158°F (-20° C to 70°C)					
Operating Humidity Range	30–90% RH (no condensation)					
Storage Humidity Range	10–95% RH (no condensation)					
Operating Altitude	Up to 6,500 feet (2,000 m)					
Installation Category	II (IEC 1010-1)					
Pollution Degree	2 (IEC 1010-1)					
Regulatory Approvals						
Safety	CSA 22.2 No. 61010-1 and UL61010-1. Marked with cCSAus, CE EN61010-1					
EMC	IC Complies with EN61326-1 Complies with EN55022, Class B, FCC Part 15B for conducted emissions Complies with EN55022, Class A, FCC Part 15A for radiated emissions Complies with EN61000-4 series of standards for immunity					

9. When using remote sense, the total of the load voltage and the load line drops must not exceed the rated output of the power supply. For example, for an XG 6-110 in an application with 1 V of load line loss (0.5 V/Line), the maximum available load voltage would be 6–1= 5 V. Note: The unit may operate at higher output voltages than this, but there is no guarantee that the power supply will meet performance specifications. Ultimately, the upper limit of the output voltage will be determined by internal circuitry of the power supply (non-adjustable.) 10. With rated, resistive load.

11. At maximum output power.

Applies to all footnotes: Programming and Readback: RS-232, RS-485, USB built in. GPIB, Ethernet optional. Specifications are guaranteed from 1% to 100% of the rated output voltage, current, and power.

Note: All specifications are subject to change.
