

Botron B8562 is a 10 light Surface Resistivity Meter that test at 100 volts. This portable test instrument provides both RTT (resistance top to top) and RTG (resistance top to ground) will measure a wide variety of static dissipative and conductive materials. The 10 lights are color codes and are easy to read. The B8562 is accurate to +/- 10%. For quick easy testing of surface any products just push the test button and read the LED lights. For ESD Audits plug leads into 2-5lbs weights and into banana jack at the top end. The 10 light rangers from 10^3 to 10^{12} . When the low battery light, lights, change the battery. **Disclaimer:** All statements of technical information are believed to be true and are based upon tests we believe to be reliable. B8562KIT with B8562 meter, 2 leads, 2-5lbs weights and case

- . To test RTT or surface to surface, place the B8562 on the surface to be tested and push down on test button and read.
- . To test RTG or surface to ground, place the B8562 on the surface, plug one stereo plug into meter top end, with other end connect to suitable ground, and push button.
- . To Audits test with 5lbs weights, plug leads into banana jack on top end of unit and test per above.

Theory of operation, The surface resistance meter measures

by setting up bridge between two precision resistors of a know value and testing of the unknown value. When the green button is depressed a test voltage of 100 volts is applied across the two conductive parallel probes on the bottom of tester or through the weights. The LED will light
